

Let's Look at Atlantic and Gulf Coast Shark Incidents

The Global Shark Attack File data contains reported shark incidents, locations, and their outcomes. The gray bubbles indicate incident locations.

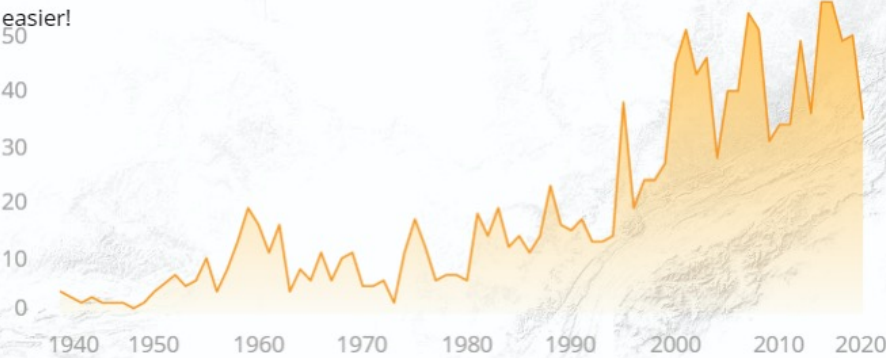

Are Sharks Really Villains?

A small percentage of 1.5k reported shark incidents resulted in the victim dying.

Incidents Rising or Better at Reporting?

The Shark Research Institute collects incidents. Older reports are from newspapers. Counts are rising because the internet makes the data collection easier!

Taste testing?

Sharks don't have hands - so if they want to know if something is edible - only one way to find out.

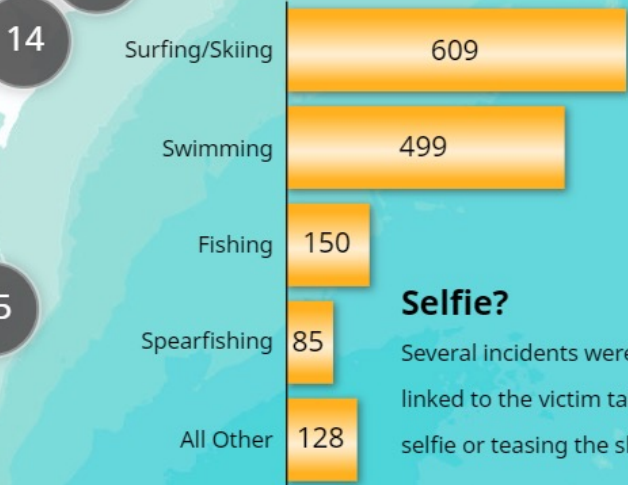

Mystery Lurks in the Deeper Waters

Air or sea disasters frequently result in a large number of deaths at once. Most incidents with sharks end in minor injuries such as a laceration.

Danger in Paradise?

Florida has the most incidents overall. With the tropical weather and alluring water activities - what human (or shark) can resist all that coastal front property?

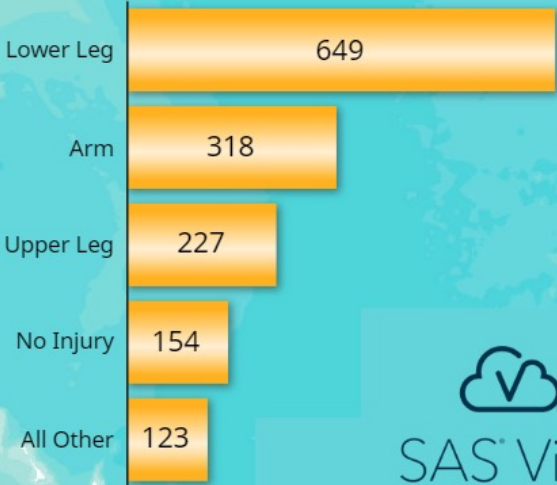

What was victim doing?

Selfie?

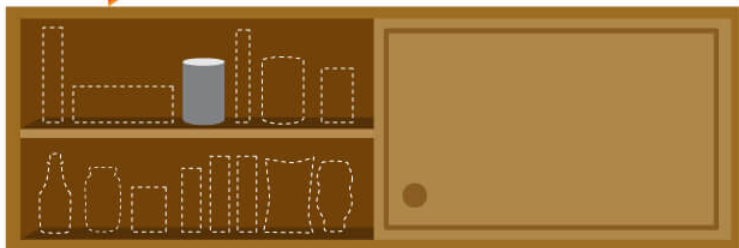

Several incidents were linked to the victim taking a selfie or teasing the shark.

Where was person injured?

EMPTY PANTRY:

THE SCARY TRUTH ABOUT FOOD INSECURITY

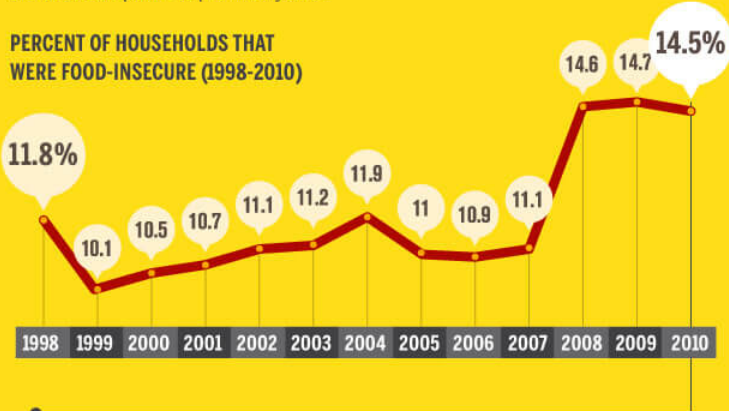

Providing sustenance for oneself and one's family is anyone's biggest priority for survival, but for millions of Americans, that's a major challenge. More than 17 million people in the United States were "food-insecure" at some point in 2010, meaning they had trouble getting enough food for themselves and members of their family. Who is going hungry and what do their struggles mean for the nation?

Food Insecurity Rates Have Risen

The prevalence of food insecurity dipped slightly from 2009 to 2010, but remains elevated compared to previous years.

PERCENT OF HOUSEHOLDS THAT WERE FOOD-INSECURE (1998-2010)

14.5 percent, or about **1 in 7** U.S. households were food-insecure at some time during 2010.

Food Security Spectrum

To define "food insecurity," we must look at the complete range of Americans' access to food.

SECURE

HIGH

No problems or limitations with access to food.

MARGINAL

One or two reports of food access problems. No change in diet or food intake.

LOW

Indications of reduced variety and quality of diet, with little or no reports of hunger.

VERY LOW

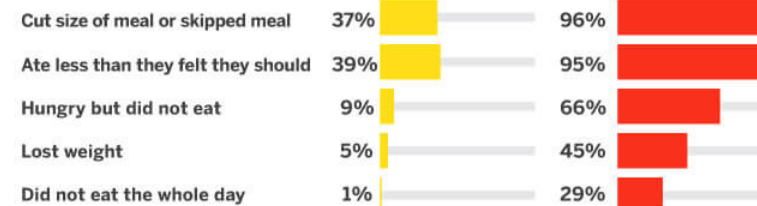

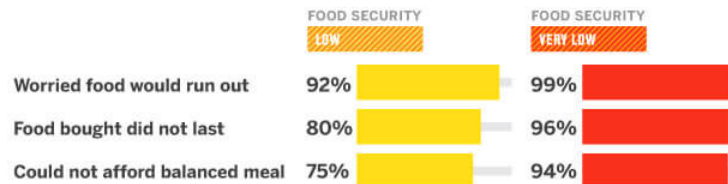

Reports of multiple instances of disrupted eating patterns and hunger.

INSECURE

Reasons for Food Insecurity

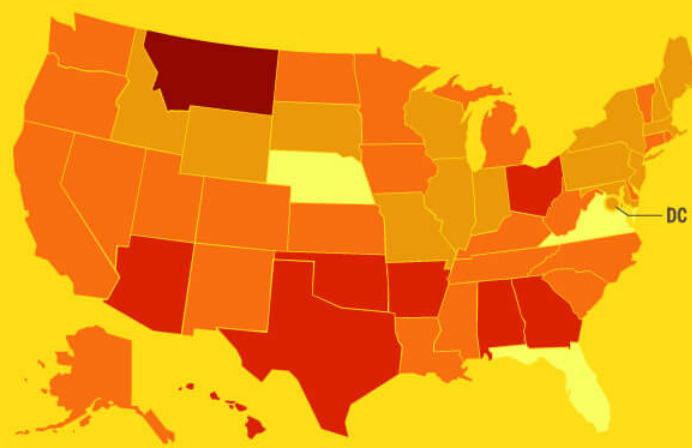

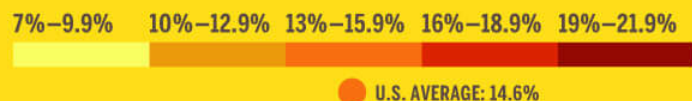

The vast majority of food-insecure Americans worry that their food supply will run out.

Wasted Planet!

Waste generated per day

2.5 Million Tons

About 100 Countries keep their mismanaged plastic waste to less than **25%**

With the same rate, China can construct another great wall with plastic waste in **6 years!**

TRINIDAD AND TOBAGO has the highest plastic waste generation per capita at

3.6 Kg / Day

US Produces the highest plastic waste, more than **128 countries** combined but more than **99%** of generated waste is properly managed

Inadequately Managed

30%

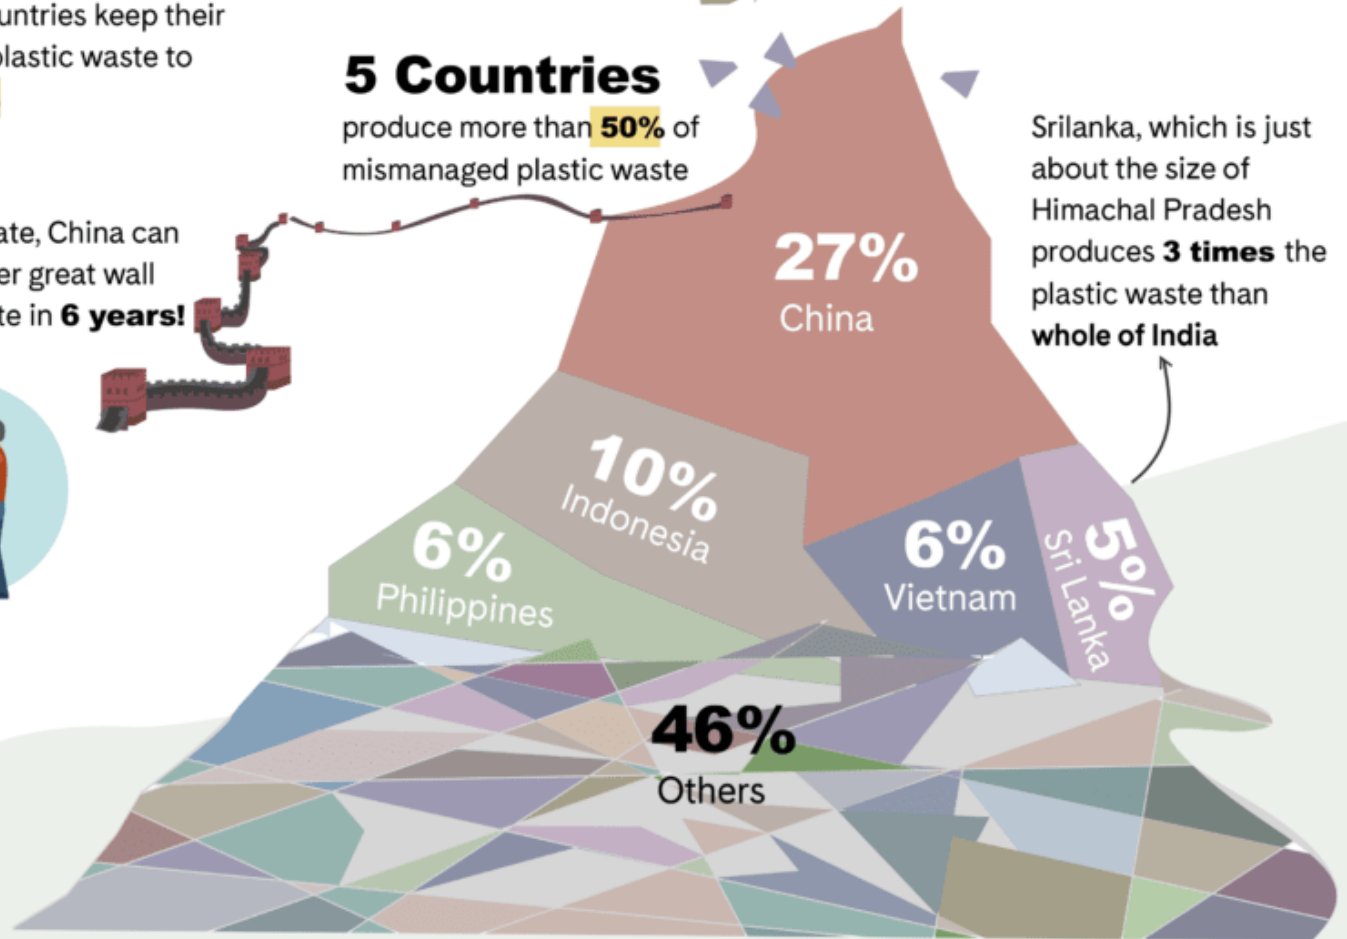

0.25M
Plastic Waste

70%

Adequately Managed

5 Countries

produce more than **50%** of mismanaged plastic waste

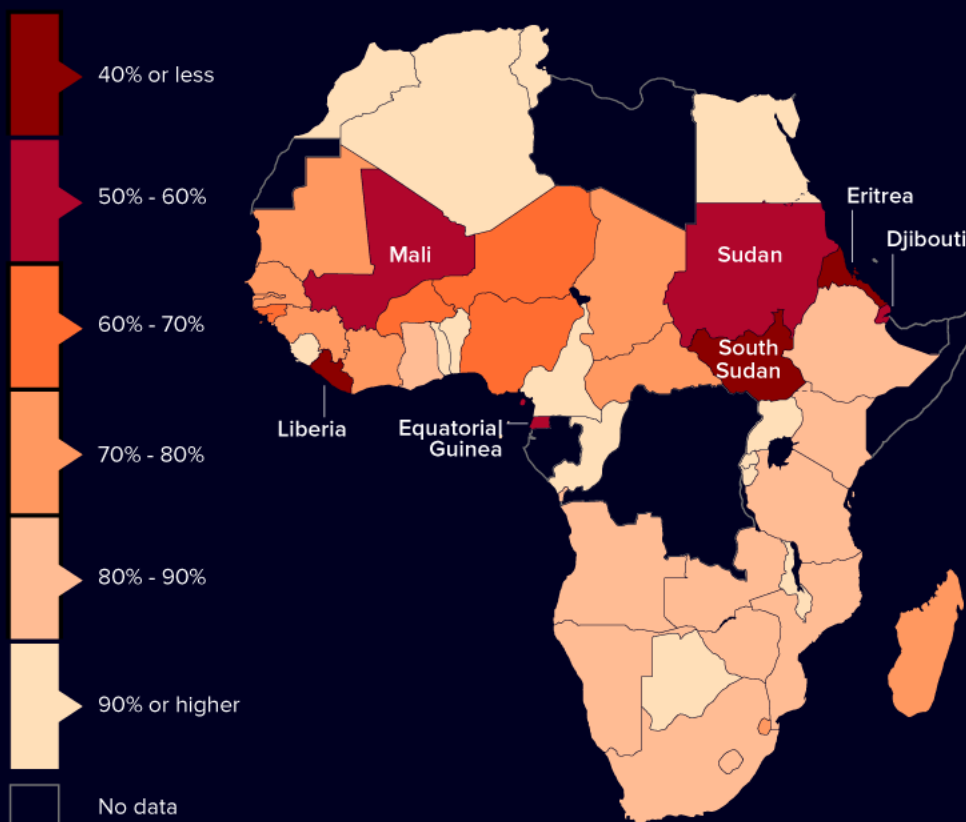

Srilanka, which is just about the size of Himachal Pradesh produces **3 times** the plastic waste than **whole of India**

The countries with the lowest primary school take-up rates in Africa are concentrated around the Sahel region, and tend to suffer from serious conflict and fragile governance. Many families cannot access schools or justify education. But this perpetuates hard economic conditions and marginalisation, which perpetuates conflict.
